

# AGROCAL 10'11

## E.U. FERTILIZER CALCIUM CORRECTOR AND GROWING UP BIO-STIMULANTING.

**AGROCAL PLUS** is a corrector developed to treat calcium imbalances in fruit trees, citrus trees and vegetables.

The calcium is complexed by poly-hydroxylated acids.

In saline-sodium lands, calcium contribution (Ca) reduces change salts (Na), so it reduces the percentage of exchangeable sodium, bringing down the electric conductivity.

Ca/Na exchange is made through organic acids activity.

- It reduces ammoniac levels.
- It transforms cellulose into dextrans and assimilable soluble sugars.
- It transforms proteins into polypeptides and assimilable soluble amino acids.
- It accelerates the change of organic matter into humic and fulvic acids.
- It increases its effectiveness in presence of calcic salts, such as carbonates and bicarbonates.

### COMPOSICIÓN:

TOTAL NITROGEN (N) .....	4,91%
AMMONIAC NITROGEN (N) .....	0,35%
NITRIC NITROGEN (N) .....	4,56%
LIGNOSULFONATES COMPLEXED	
CALCIUM (CaO) .....	10,11%
SUGARS AND REDUCERS.....	6,00%
ORGANIC MATTER .....	22.35%

### Dosis de aplicación:

	Radicular application Kg/Ha	Observations
Every cultivation	4-6	Application after transplanting or beginning sprout. Intervals of 7-15 days.
