

AgroFul Extra

Refined fulvic acids from vegetable origin, with ligno sulphonates.

Refined fulvic acids and ligno sulphonates, are organic acids naturally developed, by natural rotting of plants residues in the land. Several researches show that refined fulvic acids with lingo sulphonates can increase bio-availability of essential minerals leaving no pollutant residues in the land where applied. They are 100% bio degradable and assailable.

AGRICULTURA

- **Complexer.**
- **Disperser.**
- **Land stabilizer.**
- **Fatten promoter.**
- **Accelerates fatten process.**
- **Increases sugar in fruits.**
- **Anti stress action.**
- **Tired lands regenerator.**
- **Acid pH.**
- **No incompatibilities with amino acids.**

Clearly understanding that minerals and oligo elements are essential for plants, but knowing that many of mineral supplements don't give those minerals in the way the plant can absorb it, several researches have showed that the presence of refined fulvic acid and lingo sulphonates in a mineral supplement increases plant's capacity to assimilate them.

Chelating refined agents chemically join small quantities of micro-nutrients applied to plants. They can join hev-y-metals in polluted lands in order that they can be removed and retrieved easily.

Dosis y composición

Horticultural and ornamentals cultivations

Drip irrigation
 - Total dose: 40-50 lt/ha
 - 1st application: second week after transplant.
 - Division: weekly applications during the cycle, in 2,5 lt/ha doses at the beginning, reducing to 1,5 lt/ha at the end of cycle.
 Foliar application: 3 t/Ha

Fruit trees

Drip irrigation
 - Total dose: 40-50 lt/ha
 - 1st application: germination.
 - Division: every 2-3 weeks. In citrus trees, every week.

Every cultivation

Composición

	p/p
Extracto húmico total	21,70%
Acido húmicos	3,33%
Ácidos fúlvicos	18,37%
De los cuales refinados	18,37%
Lignosulfonato	3,10%
pH	3,5-4
Densidad	1,12
Apariencia. Líquido marrón claro.	

Proceso único de extracción.
