

AGRO KUAT

Corrector of deficiencies of Boron and Molybdenum

Sprout promoter

Agro Kuant is especially formulated for its application as much by foliar route as to radicular in deficiency situations or carries far necessity of Boron and Molybdenum.

The application of Agro Kuant is essentially important in processes of sprout with adverse climatologic conditions, or in very problematic cultures in the flower production and sprout.

Agro Kuant as much in horticultural cultures as in fruit trees and citruses is recommended at the same time as it improves the quality of the flower in cultures dedicated to cut flower.

The fatty acid content in combination with the enzymatic complex for of Kuant Land a powerful tool that at the same time as it corrects the deficiencies of Boron and Molybdenum assures a homogenous mincemeat.

Dose:
 Radicular applicaion: 4-6 Lts/Ha
 Foliar application: 200-300 cc/HI

Composition:

Boron (B)	5,20 %
Molybdenum (Mo)	5,13 %
Organic matter and vegetal	
fulvic acids	2,25 %
enzymatic Complex	1,00 %
Fatty acids	2,00 %
