

# Agro Odim

**Photo-biological hydrogen peroxide active precursor**

## **Active calcium & titanium shortage corrector. Pro-Active of hydrogen peroxide**

**Agro Odim** is based on active calcium and titanium ions, showing an excellent stability.

Thanks to its special composition and concentration, **Agro Odim** works as a fortifier which helps to nutrition and calcium translocation.

"**Agro Odim** is a photo-biological reactor which extends fruits and vegetables shelf life by mixing ultraviolet rays action with calcified titanium dioxide. It was developed NASA and Wisconsin University, in Madison, and it has been used successfully in special crafts during the last 10 years. Nowadays, this technology, which is endorsed by several researches for the use of micro organisms carried by air and allergenic, is mainly used in medical applications".

**Agro Odim** is activated by UV rays action, turning into hydrogen peroxide.

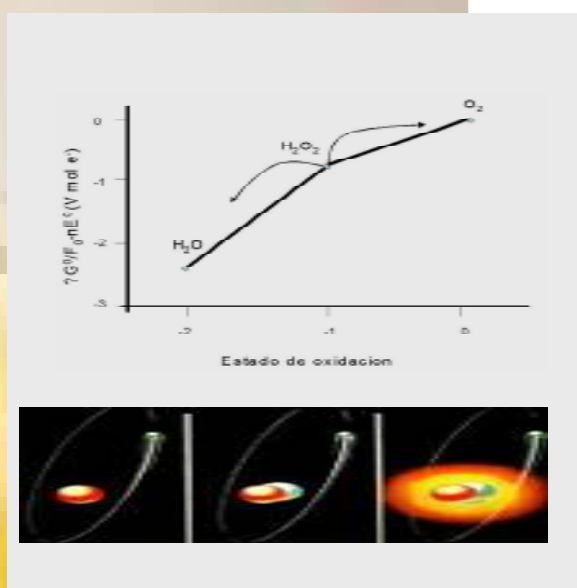

Applying **Agro Odim** via drip irrigation reduces nitrates in land (this can reach the 50%, according to several Spanish Universities).

Application way: Foliar, using thin nozzle, so that a very fine film of the product is placed on the plant.

Specifications: No special conditions are required about pH or temperature.

### **COMPOSITION:**

Watered dispersion of mineral pigments, with alimentary quality at 20% and 5-15% anionic tension actives.  
White liquid.

### **Application doses:**

	Foliar Applitacion
Every cultivation	1 cc/lts.
